

SETHU

Master Website Requirement & Product Specification

Evaluate. Score. Match.

Developer / Designer Prerequisite & Master Brief

Website MVP • Brand • UX • Content • Algorithm Communication • Waitlist

Document Purpose

This document is the single source of truth for the first version of the SETHU website. It consolidates the product concept, positioning, algorithm framework, scoring concepts, user experience, visual identity, content, technical direction, waitlist and developer acceptance criteria.

The website should communicate SETHU as a data driven business evaluation and people matching platform. The core message is: SETHU evaluates businesses. SETHU evaluates people. SETHU connects the right people with the right businesses.

North Star

SETHU is the bridge between existing businesses and capable people.

The algorithm is the story. The scoring system is the product concept. The matching layer is the differentiation. The waitlist is the conversion mechanism.

Quick Brand Reference

Element	Specification
Primary brand	SETHU
Primary message	Find the Right Business. Find the Right Person.
Signature line	Evaluate. Score. Match.
Primary palette	Dark navy → blue gradient
Primary font	Inter
Primary CTA	Join the Waitlist
Secondary CTA	Explore the Algorithm

Quick Brand Reference

Element	Specification
Primary brand	SETHU
Primary message	Find the Right Business. Find the Right Person.
Signature line	Evaluate. Score. Match.
Primary palette	Dark navy → blue gradient
Primary font	Inter
Primary CTA	Join the Waitlist
Secondary CTA	Explore the Algorithm

1. COMPANY / PRODUCT NAME

SETHU — Use SETHU consistently throughout the website. The official website-facing brand should be SETHU. The name represents a bridge: Businesses ↔ People, more specifically Existing Businesses ↔ Capable Individuals.

2. CORE POSITIONING

Core concept — SETHU is a data driven platform designed to evaluate existing businesses, evaluate individuals, and identify compatibility between the two.

SETHU Business Algorithm — Evaluates the quality, stability, attractiveness, risk and growth potential of a business.

SETHU Personal Algorithm — Evaluates the capabilities, experience, interests, behavioural characteristics and intent of an individual.

SETHU Match Engine — Compares the business and individual profiles to determine compatibility.

Core architecture — BUSINESS DATA → BUSINESS ALGORITHM → BUSINESS SCORE; PERSON DATA → PERSONAL ALGORITHM → PERSONAL SCORE; both feed the MATCH ENGINE → MATCH SCORE → EXPLAINED MATCH → BUSINESS ↔ PERSON.

SETHU FLOW BUSINESS DATA → BUSINESS ALGORITHM → BUSINESS SCORE PERSON DATA → PERSONAL ALGORITHM → PERSONAL SCORE BOTH → MATCH ENGINE → MATCH SCORE → EXPLAINED MATCH

3. CENTRAL WEBSITE MESSAGE

Primary message — Find the Right Business. Find the Right Person.

Supporting statement — SETHU evaluates businesses and people through structured data, assessments and intelligent scoring, then identifies potential matches based on compatibility rather than guesswork.

Supporting line — Two scores. One matching engine. Better business connections.

4. WEBSITE OBJECTIVES

Objective 1 — Explain SETHU so a visitor who has never heard of it understands what the company does.

Objective 2 — Explain the two algorithms and make clear that SETHU evaluates both sides independently.

Objective 3 — Explain the matching process and clarify that the scores are not simply added together.

Objective 4 — Build credibility through a structured, analytical and data driven presentation.

Objective 5 — Capture early interest through a simple waitlist using Name + Email.

5. TARGET AUDIENCE

Business Owners — Owners of existing businesses who want to exit, find an operator, find a successor, explore acquisition, understand their business's position or discover growth opportunities.

Aspiring Business Operators — MBA students, undergraduate students, young professionals, entrepreneurs, business operators, career switchers and aspiring founders who want to operate an existing business rather than start from zero.

Investors / Acquirers — People interested in evaluating and potentially acquiring existing businesses. This audience can become more important as SETHU develops.

6. BRAND PERSONALITY

Brand attributes — Intelligence, trust, precision, ambition, transparency, professionalism, modern technology and business seriousness.

Avoid — Cartoonish or overly playful visuals, student-project aesthetics, generic AI SaaS styling, crypto aesthetics, traditional consulting-company styling, or generic brokerage styling.

Desired feel — Technology + Finance + Business Intelligence + Marketplace.

7. BRAND COLOUR SYSTEM

SETHU Deep Navy — #071A3D — main backgrounds, navigation, hero sections, major headings and footer.

SETHU Navy Blue — #0B2D66 — secondary backgrounds, cards and navigation elements.

SETHU Blue — #1557B0 — primary buttons, links, active states and important interface elements.

SETHU Bright Blue — #2F80ED — highlights, data visualisations, algorithm animations, score indicators and interactive elements.

SETHU Light Blue — #8DB9F4 — secondary visual elements, graphs and background highlights.

SETHU Pale Blue — #EAF3FF — light cards, information blocks and input areas.

White — #FFFFFF — typography on dark backgrounds, cards and negative space.

Neutral Grey — #667085 — secondary text and metadata.

Light Grey — #F5F7FA — neutral backgrounds and form areas.

8. GRADIENT SYSTEM

Signature gradient — #071A3D → #0B2D66 → #1557B0 → #2F80ED.

Use cases — Hero background, algorithm visual, CTA section, score visualisation, button hover states and decorative data flows.

Rule — Use gradients selectively. Retain substantial areas of solid colour and white space.

9. TYPOGRAPHY

Primary font — Inter. Alternatives: Manrope, Plus Jakarta Sans or Geist.

Hierarchy — Large bold H1, strong H2/H3 headings, readable body text, and semibold/bold typography for scores and metrics.

Rule — Avoid excessive italic typography.

10. LOGO

Primary treatment — SETHU.

Direction — Minimal geometric wordmark with an optional subtle bridge or connection concept. It must work in white on dark blue, dark blue on white, blue gradient and favicon formats.

11. NAVIGATION

Desktop navigation — SETHU | How It Works | Algorithm | For Businesses | For People | Examples | Join Waitlist.

Optional future navigation — Businesses | People | Insights | About.

12. HOMEPAGE STRUCTURE

Scroll sequence — 1. Navigation; 2. Hero; 3. What is SETHU?; 4. The Problem; 5. The SETHU Solution; 6. Two Way Algorithm; 7. Business Algorithm; 8. Personal Algorithm; 9. Match Engine; 10. Example Match; 11. How It Works; 12. Who SETHU Is For; 13. Why SETHU; 14. Waitlist; 15. Footer.

13. HERO SECTION

Headline — Find the Right Business. Find the Right Person.

Supporting copy — SETHU evaluates businesses and people through structured data, assessments and intelligent scoring, then identifies where they fit.

Primary CTA — Join the Waitlist

Secondary CTA — Explore the Algorithm

Hero visual — Show the two-way algorithm with Business → Business Score and Person → Personal Score converging through SETHU into a Match Score.

Support line — Evaluate. Score. Match.

14. WHAT IS SETHU?

Heading — Businesses already exist. Talent already exists.

Subheading — The problem is finding the right bridge between them.

Body — Thousands of businesses already have customers, revenue, infrastructure, employees and market presence. At the same time, thousands of capable individuals want meaningful opportunities to operate, grow, acquire or build businesses. SETHU creates the connection between the two. We evaluate the business. We

evaluate the person. Then we identify where the two are compatible.

15. THE PROBLEM

Heading — The opportunity is often not the problem. The match is.

Business-side challenges — Identifying the right successor, operator, growth partner or acquirer.

Person-side challenges — Identifying businesses that suit their skills, industries, location, experience and ambitions.

SETHU response — Address the connection problem with structured evaluation and compatibility matching.

16. THE SETHU SOLUTION

Heading — A two sided intelligence layer for business opportunities.

Core logic — Understand the business. Understand the person. Understand the relationship between them.

17. THE SETHU ALGORITHM

Heading — The SETHU Algorithm

Subheading — Two scores. One matching engine.

Body — SETHU uses two complementary evaluation systems. The Business Algorithm evaluates the opportunity. The Personal Algorithm evaluates the individual. The Match Engine then compares both sides to identify compatibility.

18. BUSINESS ALGORITHM

Heading — SETHU Business Algorithm

Subheading — Understand the business before matching the person.

Body — Every business is different. SETHU evaluates multiple dimensions rather than relying on a single metric such as revenue or profit.

01. Financial Performance — Revenue, profit, losses, profit margins, revenue growth, profit growth, cash flow and revenue consistency.

02. Capital & Investment — Initial investment, capital employed, current assets, asset base, return on investment and capital efficiency.

03. Valuation — Estimated business value, 100% ownership value, revenue multiples, profit based valuation, asset value where applicable and market comparables where available. Treat this as an estimated valuation, not an absolute truth.

04. Market Strength — Market demand, industry attractiveness, local demand, customer base and market density.

05. Location — Geography, population, footfall, accessibility, local demographics, purchasing power and location relevance.

06. Competition — Number of competitors, proximity, competitor strength, market saturation and differentiation.

07. Reputation — Google rating, number of Google reviews, review consistency, customer sentiment and online presence.

08. Operational Stability — Employee structure, owner dependency, process maturity, supplier dependency, customer concentration, recurring revenue and operational consistency.

09. Growth Potential — Historical growth, untapped capacity, expansion opportunities, new products, new locations, digital opportunities, marketing opportunities and operational improvements.

19. BUSINESS SCORE

Score — Every evaluated business receives a SETHU Business Score on an initial 0–100 scale.

Presentation — Do not display only the final score. Show the component dimensions and make the result explainable.

Example — Financial Performance 84; Market Strength 76; Location 82; Reputation 88; Operations 81; Growth Potential 71; Capital Efficiency 79.

20. SCORE + RISK + CONFIDENCE

Business Score — Example: 78/100.

Risk Profile — Example: Moderate.

Data Confidence — Example: 87%.

Purpose — Data Confidence indicates the quality and completeness of the underlying information. Verified financials, ownership, reviews and operational data should produce stronger confidence than primarily self reported data.

21. BUSINESS SCORE EXAMPLE

Example business — Local Café.

Data — Revenue ■48 lakh/year; Profit ■9.6 lakh/year; Initial Investment ■20 lakh; Google Rating 4.5/5; Reviews 1,250+; Competition Moderate; Location High footfall; Revenue Growth 18%.

Example output — 78/100.

Interpretation — Established and profitable business with strong reputation and location fundamentals, but moderate growth potential and meaningful local competition.

22. PERSONAL ALGORITHM

Heading — SETHU Personal Algorithm

Subheading — Understand the person before making the match.

Body — A business opportunity is only as valuable as the person who can execute against it. SETHU evaluates an individual's capabilities, experience, interests and intent to understand where they may fit.

23. PERSONAL DATA INPUTS

Profile Data — Name, education, degree, institution, certifications, industry experience, internship experience, projects and leadership experience.

LinkedIn / Professional Profile — Where appropriate and with user consent: professional history, skills, experience, projects, education, certifications and professional interests. LinkedIn data should be one input, not absolute truth.

Assessment — Business knowledge, analytical reasoning, financial understanding, problem solving, decision making, communication and business judgement.

Behavioural Assessment — Ownership mindset, leadership, risk tolerance, persistence, learning orientation, collaboration and adaptability.

Intent — Industry interest, business type, operator vs investor preference, location, time commitment, role preference, growth preference and responsibility level.

24. PERSONAL SCORE

Score — Every individual receives a SETHU Personal Score on an initial 0–100 scale.

Example dimensions — Knowledge 87; Analytical Capability 91; Experience 74; Behavioural Profile 81; Intent 89; Opportunity Fit 92.

25. PERSONAL SCORE EXAMPLE

Example candidate — MBA Student.

Profile — MBA Finance; 2 internships; Business Knowledge 87/100; Analytical Ability 91/100; Leadership 78/100; Industry Interest Food & Hospitality; Location Chennai; Availability Full time; Entrepreneurial Intent High.

Example score — 84/100.

26. MATCH ENGINE

Heading — Where the two sides meet.

Subheading — A high score does not automatically mean a high quality match.

Core rule — SETHU does not simply add the Business Score and Personal Score together. The Match Engine compares the specific requirements and characteristics of the business with the capabilities, preferences and intent of the individual.

27. MATCHING FACTORS

Industry Fit — Does the person's industry interest align with the business?

Location Fit — Does the person's location preference align with the business?

Capability Fit — Does the individual have the capabilities required by the business?

Experience Fit — Does the person's experience align with the complexity of the business?

Role Fit — Does the person want to operate, invest, acquire or support the business?

Commitment Fit — Does available time align with the business's needs?

Growth Fit — Does the individual's ambition align with the growth opportunity?

Risk Fit — Does the person's risk preference align with the business's risk profile?

28. MATCH SCORE

Score — SETHU Match Score, initially 0–100.

Example — 91/100.

Explanation — Industry alignment, geographic alignment, strong financial capability, operator preference and availability can support a strong match. Limited direct hospitality experience could be an identified gap.

29. MATCH EXAMPLE

Business — Local Café; Revenue ■48L; Profit ■9.6L; Location Chennai; Industry Food & Beverage; Business Score 78/100; needs a full time operator, financial discipline, customer management and growth mindset.

Person — MBA Finance Student; Personal Score 84/100; interested in Food & Beverage; Chennai; full time; capabilities in finance, analytics, operations and business development.

SETHU Match — 91/100.

Why — Strong industry fit, strong location fit, strong financial capability, strong commitment and growth orientation; moderate direct industry experience.

30. FULL ALGORITHM FLOW

Flow — DATA → BUSINESS DATA + PERSON DATA → BUSINESS ENGINE + PERSONAL ENGINE → BUSINESS SCORE + PERSONAL SCORE → MATCH ENGINE → COMPATIBILITY SCORE → MATCH EXPLANATION → BUSINESS ↔ PERSON.

SETHU FLOW DATA → BUSINESS DATA + PERSON DATA → BUSINESS ENGINE + PERSONAL ENGINE → BUSINESS SCORE + PERSONAL SCORE → MATCH ENGINE → COMPATIBILITY SCORE → MATCH EXPLANATION → BUSINESS ↔ PERSON

31. HOW SETHU WORKS

01 — Evaluate — Businesses submit their information. Individuals create profiles and complete assessments.

02 — Score — SETHU generates Business Score and Personal Score.

03 — Match — SETHU compares the characteristics and requirements of both sides and identifies compatible opportunities.

CTA — Join the SETHU Waitlist.

32. REAL WORLD SCENARIOS

Scenario 01 — A profitable café owner wants to step away. SETHU evaluates the café, identifies interested operators and can surface a high compatibility match.

Scenario 02 — An MBA student wants to operate a business. SETHU identifies existing businesses based on skills, industry, location, experience, risk profile, commitment and growth preference.

Scenario 03 — A business needs a growth oriented operator. SETHU looks for capability and compatibility rather than simply selecting the person with the highest Personal Score.

33. IMPORTANT PRODUCT PRINCIPLE

Core statement — The highest score is not necessarily the best match.

Explanation — A person with a Personal Score of 95 may be excellent generally but a poor fit for a particular business. A person with a Personal Score of 82 may have a much stronger Match Score for that business.

Relationship — Personal Score $\neq$ Match Score; Business Score $\neq$ Match Score. The Match Engine is a separate layer.

34. WHY SETHU?

Data over intuition — Businesses and people are evaluated through structured information, assessments and measurable attributes.

Two sided intelligence — SETHU understands both the opportunity and the individual before identifying a connection.

Compatibility over popularity — The highest scoring person is not necessarily the right person. SETHU focuses on the relationship between opportunity and individual.

Explainable matching — SETHU should show why two sides were matched rather than only presenting a number.

35. FUTURE DATA FLYWHEEL

Concept — Business data + person data → SETHU scores → matches → real world outcomes → success/failure data → model improvement → better matches → more outcome data.

Potential outcome data — Business performance, operator performance, retention, growth, business survival, match quality, role fit and user behaviour.

SETHU FLOW BUSINESS DATA + PERSON DATA → SCORES → MATCHES → REAL WORLD OUTCOMES →
OUTCOME DATA → MODEL IMPROVEMENT → BETTER MATCHES

36. DO NOT OVERCLAIM AI

Avoid — “Our AI finds the perfect business for you.” or “Our AI guarantees the best match.”

Preferred language — Data driven evaluation and matching; an intelligent scoring and matching system; a structured algorithm for evaluating businesses and people.

Evolution — The initial system can use rules, weighted scoring and structured assessments. Machine learning can be introduced when sufficient high quality outcome data exists.

37. WEBSITE / PRODUCT ARCHITECTURE

Concept — The long term system can include a data layer, business scoring, personal scoring, a match engine, outcome data and a learning system.

Important distinction — The public marketing website and the future SETHU platform are different products. The first website should explain the intelligence layer without attempting to build the entire marketplace.

SETHU FLOW SETHU DATA LAYER → BUSINESS SCORING + PERSONAL SCORING → MATCH ENGINE →
OUTCOME DATA → LEARNING SYSTEM

38. WAITLIST SECTION

Heading — Be among the first to experience SETHU.

Subheading — We're building a new way to connect people with existing business opportunities. Join the early access list and stay updated as SETHU develops.

Fields — Full Name — Enter your name; Email Address — Enter your email.

CTA — Join the Waitlist.

Consent copy — By joining the waitlist, you'll receive updates about SETHU and its early access opportunities.

39. WAITLIST SUCCESS STATE

Heading — You're on the list.

Message — Thanks for joining SETHU. We'll keep you updated as we build the platform.

Optional CTA — Back to SETHU.

40. WAITLIST BACKEND REQUIREMENT

Minimum fields — Name; Email; Timestamp; Source.

Future optional field — User Type: Business Owner, Student, MBA, Professional, Investor, Other. Do not make this mandatory in the initial waitlist.

41. FOOTER

Brand line — SETHU — Connecting businesses with capable people through data driven evaluation and intelligent matching.

Navigation — How It Works; Algorithm; For Businesses; For People; Join Waitlist.

Legal — Privacy Policy; Terms of Use.

Copyright — © SETHU. All rights reserved.

42. RESPONSIVE DESIGN

Requirement — Design mobile first for mobile, tablet, laptop and desktop.

Mobile algorithm layout — BUSINESS → BUSINESS SCORE → MATCH ENGINE ← PERSONAL SCORE ← PERSON.

Rule — Do not merely shrink desktop flowcharts; reformat them vertically for mobile readability.

43. INTERACTION DESIGN

Score animations — Numbers can count upward when score cards enter the viewport.

Flow animations — Subtle data points can travel through Business Data → Business Algorithm → Business Score and Person Data → Personal Algorithm → Personal Score, then converge at Match Engine.

Hover cards — Hovering over a factor such as Financial Performance can reveal a short explanation.

Match animation — Business and person cards can move toward the centre and reveal the Match Score.

Rule — Animations should feel sophisticated and restrained, not gamified.

44. UI COMPONENTS

Reusable components — Navigation, buttons, score cards, algorithm cards, data cards, profile cards, business cards, match cards, metric cards, flow diagrams, timeline, forms, FAQ accordion, footer and waitlist form.

45. SCORE CARD DESIGN

Structure — SETHU BUSINESS SCORE; 78/100; component scores for Financial Performance, Market Strength, Location, Reputation, Operations, Growth Potential and Capital Efficiency; Risk: Moderate; Confidence: 87%.

Visual — Use circular progress, horizontal bars or clean data visualisation. Avoid excessive gauges.

46. MATCH CARD DESIGN

Structure — SETHU MATCH; Business ↔ Person; 91/100; Industry Fit, Location Fit, Capability Fit, Experience Fit, Commitment Fit; Why this match?

47. BUSINESS CARD DESIGN

Structure — LOCAL CAFÉ; Chennai; Food & Beverage; Revenue ■48L; Profit ■9.6L; Growth 18%; SETHU SCORE 78/100; Risk Moderate.

Rule — Use fictional data only in public examples.

48. PERSONAL CARD DESIGN

Structure — MBA CANDIDATE; Chennai; Finance / F&B; Experience 2 internships; Assessment 82; Analytics 91; Leadership 78; SETHU SCORE 84/100.

49. WEBSITE COPY STYLE

Style — Short, direct, intelligent, professional, human and data oriented.

Avoid — Generic startup buzzwords, empty claims, “revolutionizing synergies,” “cutting edge ecosystem,” or other meaningless language.

Preferred example — SETHU evaluates the business. SETHU evaluates the person. Then it finds where they fit.

50. PRIMARY CALL TO ACTIONS

Primary — Join the Waitlist.

Secondary — Explore the Algorithm.

Additional — For Business Owners; For People; See an Example.

51. FAQ SECTION

What is SETHU? — SETHU is a platform designed to evaluate existing businesses, evaluate individuals and identify compatible matches between them.

What is the SETHU Business Score? — A structured evaluation across financial, operational, market, location, reputation and growth related factors.

What is the SETHU Personal Score? — An evaluation of knowledge, capabilities, experience, behavioural characteristics and intent.

Is the highest Personal Score always the best candidate? — No. The Match Score is separate from the Personal Score. A lower overall score can be a stronger fit for a specific business.

How does SETHU match people with businesses? — The Match Engine compares business requirements with individual capabilities, preferences and intent.

Does SETHU guarantee a successful match? — No. The system is decision support and compatibility analysis, not a guarantee.

How is the Business Score calculated? — It considers financial performance, capital efficiency, valuation, market conditions, location, competition, reputation, operational stability and growth potential.

How is the Personal Score calculated? — It can incorporate education, experience, professional information, structured assessments, behavioural assessments and preferences.

Will SETHU use AI? — The initial system can use structured scoring and matching logic. Machine learning can be added as sufficient high quality outcome data becomes available.

52. TRUST & TRANSPARENCY

Disclosure — SETHU Scores are decision support tools, not guarantees.

Suggested language — Scores are generated using available data and defined evaluation criteria. Actual business performance and individual outcomes may differ.

53. PRIVACY

Sensitive information — SETHU may eventually process financial data, business information, professional profiles, assessment responses and personal information.

Requirements — Privacy Policy, Terms of Use, consent mechanisms, data usage explanation, data deletion process and appropriate access controls.

External profile data — Do not scrape or process external professional profile information without appropriate user consent and compliance with applicable platform rules.

54. SECURITY DIRECTION

Requirement — Sensitive information should not be exposed publicly. Public website uses example/anonymised data; authenticated platform handles actual business and personal data. Sensitive financial information must never be embedded in frontend source code.

55. PERFORMANCE REQUIREMENTS

Requirements — Fast, responsive, SEO friendly, accessible and mobile friendly. Avoid unnecessarily large animation libraries or image assets. Algorithm visuals should be implemented efficiently.

56. SEO BASICS

Title — SETHU | Find the Right Business. Find the Right Person.

Meta description — SETHU evaluates businesses and people through structured scoring and intelligent matching to identify compatible business opportunities.

Potential keywords — business acquisition platform; business matching; business opportunities; business evaluation; business score; entrepreneur opportunities; business operators; small business acquisition; business succession; MBA business opportunities.

Rule — Do not keyword stuff.

57. WEBSITE INFORMATION ARCHITECTURE

Structure — /; /algorithm; /businesses; /people; /examples; /waitlist; /privacy; /terms. For MVP, some can be sections rather than separate pages.

58. MVP VS FUTURE PRODUCT

MVP website — Landing page, algorithm explanation, business score example, personal score example, match example, waitlist, responsive design, basic animations, FAQ and privacy/terms placeholders.

Future platform — Business onboarding, verification, business dashboard, personal onboarding, assessment system, personal dashboard, business marketplace, match recommendations, match explanations, messaging, verification, acquisition workflow, analytics, notifications and admin dashboard.

Rule — Do not attempt to build the entire marketplace into the first landing page.

59. LONG TERM PRODUCT STRUCTURE

Ecosystem — SETHU → Businesses + People + Data → Business Score + Personal Score → Match Engine → Opportunities → Transactions → Outcomes → Data Flywheel.

Positioning — SETHU is better framed as an intelligence and matching layer for existing business opportunities than simply as a marketplace.

60. VISUAL STORY OF THE WEBSITE

Scroll story — I have a problem → There are businesses → There are capable people → They don't always find each other → SETHU evaluates both → Business Score + Personal Score → Match Engine → Compatibility → Explained Match → Potential Opportunity.

61. CORE WEBSITE COPY

Hero — Find the Right Business. Find the Right Person. SETHU evaluates businesses and people through structured data, assessments and intelligent scoring, then identifies where they fit.

Algorithm — Two scores. One matching engine. SETHU evaluates the opportunity and the individual separately before identifying compatibility between them.

Business — Understand the business before matching the person.

Personal — Understand the person before making the match.

Match — The highest score isn't always the best match. SETHU compares the specific needs of a business with the capabilities and intent of an individual.

Final CTA — The right opportunity can change a career. The right person can change a business. SETHU is building the bridge between them.

62. DESIGN DIRECTION

Visual direction — Dark blue + white + blue gradients; data rich but not overwhelming; minimal but not empty; professional but not boring; technological but not gimmicky; premium but accessible.

UI principles — Large typography, generous spacing, strong cards, clean diagrams and restrained animation.

63. HERO VISUAL DIRECTION

Recommended visual — Two data panels: Business with Revenue █48L, Profit █9.6L, Growth 18%, Score 78/100; Person with MBA Finance, Analytics 91, Experience 74, Score 84/100; both converge into SETHU and reveal Match 91/100.

64. WHAT THE DEVELOPER SHOULD NOT DO

Do not — Overuse gradients; use stock photos of generic business handshakes; use generic AI robot imagery; fill the site with meaningless buzzwords; make the algorithm appear magical; present fabricated scores as real data; claim guaranteed outcomes; make the score look like an investment recommendation; reveal proprietary scoring weights; build unnecessary animations; make every section dark; use too many colours; overload the homepage with text.

65. CONTENT HIERARCHY

Level 1 — What is SETHU?

Level 2 — How does SETHU work?

Level 3 — Business Algorithm.

Level 4 — Personal Algorithm.

Level 5 — Match Engine.

Level 6 — Examples.

Level 7 — Join the Waitlist.

66. DEVELOPER ACCEPTANCE CRITERIA

Question 1 — What is SETHU? Answer: A platform that evaluates businesses and people and identifies potential matches.

Question 2 — What is the Business Algorithm? Answer: A structured system that evaluates quality, stability, market position and growth potential.

Question 3 — What is the Personal Algorithm? Answer: A system that evaluates knowledge, capabilities, experience, behaviour and intent.

Question 4 — What is the Match Engine? Answer: A system that compares business requirements with individual capabilities and preferences.

Question 5 — Why isn't the highest score automatically the best match? Answer: Compatibility depends on the relationship between the specific business and individual.

Question 6 — What should I do if interested? Answer: Join the waitlist.

67. ONE SENTENCE TEST

One sentence — SETHU evaluates businesses, evaluates people, and connects them based on compatibility.

68. THREE WORD VERSION

Three words — Evaluate. Score. Match.

69. FINAL WEBSITE FLOW

Flow — Navigation → Hero → What is SETHU? → The Problem → The SETHU Solution → The SETHU Algorithm → Business Algorithm → Personal Algorithm → Match Engine → Example Match → How It Works → Who SETHU Is For → Why SETHU → Waitlist → Footer.

SETHU FLOW NAVIGATION → HERO → WHAT IS SETHU? → PROBLEM → SOLUTION → ALGORITHM → BUSINESS → PERSONAL → MATCH → EXAMPLE → HOW IT WORKS → WHY SETHU → WAITLIST → FOOTER

70. FINAL DIRECTION TO THE WEBSITE TEAM

North star — Build the first version of SETHU around one core idea: SETHU is the bridge between existing businesses and capable people.

Product logic — Business → Business Score; Person → Personal Score; Both → Match Engine; Match Engine → Match Score; Match Score → Explained Opportunity.

Strategic guidance — The algorithm is the story. The scoring system is the product concept. The matching layer is the differentiation. The waitlist is the conversion mechanism. The visual identity should reinforce all four.

Final brand line — SETHU — Building the bridge between businesses and people.

Appendix A — Developer Build Checklist

- Responsive navigation with SETHU wordmark
- Hero with primary and secondary CTAs
- Dark blue / blue visual system implemented consistently
- Two-way algorithm visual
- Business Algorithm section with nine evaluation dimensions
- Personal Algorithm section with profile, assessment, behavioural and intent inputs
- Business Score example with component breakdown
- Personal Score example with component breakdown
- Match Engine example with Match Score and explanation
- Risk Profile and Data Confidence concepts
- Real-world scenario cards
- How It Works section
- Why SETHU section
- FAQ accordion
- Waitlist form with Name + Email
- Waitlist success state
- Backend capture of Name, Email, Timestamp and Source
- Mobile reflow of algorithm diagrams
- Subtle score and flow animations
- Privacy Policy and Terms placeholders
- SEO title and meta description
- Accessible contrast and keyboard-friendly interactions
- No fabricated real-world business data
- No guaranteed outcome claims
- No unnecessary AI / robot imagery
- No disclosure of proprietary scoring weights

Appendix B — Final One-Sentence Product Definition

SETHU evaluates businesses, evaluates people, and connects them based on compatibility.

Appendix C — Final Three-Word Brand Expression

EVALUATE. SCORE. MATCH.

Brand Correction Confirmation

All occurrences of the brand name have been corrected from SETU to SETHU throughout this regenerated document.

Official brand: SETHU

Signature: EVALUATE. SCORE. MATCH.
